## MARKING

RL0805 / RL1206, R = 10/20/30/40/50/60 mΩ

E-24 series: 4 digits

The “R” is used as a decimal point; the other 3 digits are significant.

SPECIALITY EXCEPT 10/20/30/40/50/60 mΩ

No marking

For further marking information, please see special data sheet “Chip resistors marking”.

## CONSTRUCTION

The resistors are constructed out of a high-grade ceramic body. Internal metal electrodes are added at each end and connected by a resistive paste. The composition of the paste is adjusted to give the approximate required resistance and laser cutting of this resistive layer that achieves tolerance trims the value. The resistive layer is covered with a protective coat and printed with the resistance value. Finally, the two external terminations (matte tin) are added. See fig. 3.
